Assessment Task 2 – C# Submission Instructions

1. What not to submit

<u>Do not submit any exe files</u> because sometimes these are considered as viruses by antivirus software. On occasions downloading student ZIP files from CloudDeakin fails because they contained exe files.

Prior to submission, please delete 'bin' and 'obj' folders that are in your GUI project folder (see Figure 1). These folders will contain exe files, and any exe files required by the marker can be rebuilt using Visual Studio.

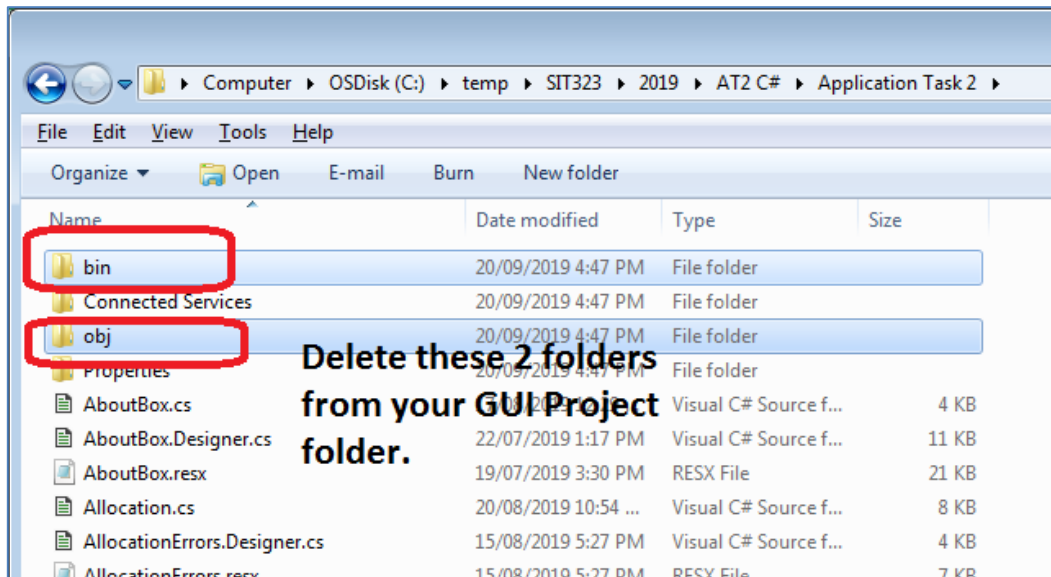

Figure 1.

2. Submission

Each student will submit one ZIP file containing:

1. A Visual Studio solution and project folders and files
2. One video file such as **"AWS Cloud System.mp4"**

Hopefully you already have everything in one folder (see Figure 2); if not, please arrange something similar. Figure 2 shows:

- Three folders for the WCF Services such as "**ALG1**", "**ALG2**" and "**ALG3**".
- One folder for your GUI Project such as "**Application Task 2**".
- One folder, if required, for your DLL Project such as "**SharedClasses**".
- One file such as "**Assessment Task 2.sln**" for your Visual Studio solution.
- One video file such as "**AWS Cloud System.mp4**".
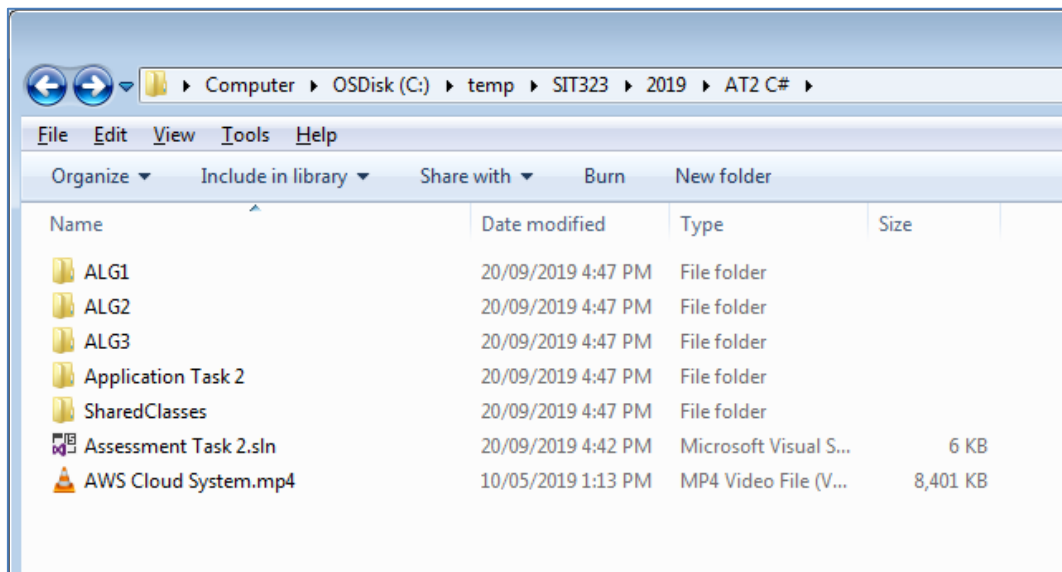

Assessment Task 2 – C# Submission Instructions

Figure 2.

Once everything is in one folder such as **"C:\temp\SIT323\2019\AT2 C#"**, you can ZIP that folder to create a file such as **"AT2 C#.zip".**

Please test your ZIP file **"AT2 C#.zip"** before submission. That is, after unzipping to a new folder, ensure that everything works as it should; **try this on another machine and hard-drive** too.

Submit your ZIP file to the SIT323 unit site in Cloud Deakin.
